

About this course

This training course is designed to give delegates extensive knowledge in ventilation and a thorough understanding of the respiratory system.

Learn how to identify complications and take appropriate actions to avoid and avert them. Understand how to apply this knowledge in real world scenarios and the difference between different types of ventilation.

Course content

Our ventilation training course is made up of theoretical learning and practical sessions, including:

- What is ventilation
- Anatomy and physiology
- Indications for ventilation
- Noninvasive ventilation
- Modes of ventilation
- Terminology
- Complications
- Specific care

Learning outcomes

- Explain ventilation
- Understand anatomy and physiology of respiratory system
- State the indications for ventilation
- Describe the different modes of ventilation
- Understanding of the terminology used in ventilation
- Explain the complications and actions to take
- Describe the specific care
